

CSS545: Mobile Computing

Marina Rosenwald

Checkpoint 3

Due: 5/12/2024

A document that includes:

[2 Points] Remaining work to be completed for the next phase of the project ("Beta")

1. Fix the bugs listed in the basic functionality implementation
 - a. Use the structure from the tutorial I watched on implementing the memories json file on the activities json file/redo how the reading and writing works in the activities json
 - b. Fix the plist so that the camera works every time/fix the camera permissions bug
2. Add more entries to the ActivitiesData.json file
3. User testing and changes involving that
4. Check security

[1 Point] Update the readme.md file appropriately (e.g. an updated version of your project plan including team members)

- Updated with photos of complete UI

Submit a pull request to update your prototype:

[5 Points] Basic functionality implemented (e.g. calculations, structured information, etc.)

- All functionality is included in the pages. However there are some bugs that need to be fixed with the Favorites json updating (i.e. it will revert itself randomly and won't always update when needed) and the camera functionality (I think this has to do with the plist)

[2 Points] Proper state management (at minimum for pause/resume)

- Page status is saved on tombstone
- Text entry is saved to user defaults on change
